INTER-OFFICE CORRESPONDENCE

To:	Cathy ELLIS	Date:	September 26, 1995
From:	Helmut Reif	Copies:	
Subject:	Hungarian projects Tatrai & Szende		

Dear Cathy,

Please find enclosed some information on the two Hungarian projects.

Dr. Tatrai is departmental leader at the Natl. Institute for Occupational Health at Budapest and works on dust burden in human lungs in general, mainly dealing with workplace exposures. During our recent discussion she expressed a very firm opinion against the validity of the Pauly paper, claiming that fibres of that size could never reach the alveoli. At the moment she thinks about a written comment.

Profs. Szende and Kendrey did a lot of work to check whether the cancer diagnosis by microscopical tissue check are really that precise and found a high degree of inaccuracy.

With best personal regards,

Helmut
