Cathy - Regarding your questions this morning.

1. The Folder itself has Morgan's name as do the some of the spectra taken in September.

2. All of the spectra I took automatically had dates recorded on them.

3. The chromatography program is preserved on a slip printed from an on board GC

printer with pencil notation - the date is after the date of the spectra, This most likely reflects that we started to used the GC for another experiment and decided to make

some notes after we reprogramed it for the next experiment, This supports the fact that

we expected to revisit the issue with improved experiment design or samples.

4. A spectrum exists in the folder from the Nermag instrument with notations and stuctures - Ray provided that spectrum and I don't know who drew the structures.
