I have sent copies of the documents to denise keane and j mulderig as well. I have been asked to give my ets talk to them today. If you don't mind I'll bring your point up to them. Though given the current environment I believe they will look to you and others for scientific direction

WRA needs to be involved since this has regulatory implications. I think we (WSA and WRA) should review the potential requests/inputs and then make a decision as to who and what should be done on this. The info may come from a variety of sources, but we need to make sure everyone is coordinated and the information we provide to external sources has undergone the appropriate scientific and regulatory review.

I have given to joy a copy of a letter from the health dept. in canada. The meeting to deal with lower toxicity cigarettes is planned for 21,22 sept, with papers to be submitted by sept 7. there are a number of subject headings (11) which include numerous sub topics. Some subjects involve product integrity issues some relate to wsa. I have only spoken with individuals who might be useful in putting together materials we might want to submit. For the product integrity pieces d cox is already assigning responsibilities as is c lilly. I await your review and guidance
