RJR Interoffice Memorandum

Subject : Review of Langston
Mortality Study

Date : November 20, 1984

To : Wallace Hayes

From : Anthony V. Colucci

DS/CA

Attached is a letter I received from John Viren which summarizes his findings as regards the Langston (Hy) analysis. John has transmitted a much larger body of data to support his conclusions but I have not included these for the sake of brevity.

John and I will draft our combined analysis into a broader more formal report in the near future but at this juncture, I felt it would be useful to see the bottom lines.

Attached is a copy of the memorandum transmitted to Sam Witt on November 14, 1984, in which I indicated the data Dr. Langston would need to collect to bring this analysis to a conclusion. Sam passed these suggestions on to Dr. Langston and we anticipate they will be forthcoming. When the data are assembled John Viren and I will work with Hy to ensure the results are written up in a publishable form.

In a meeting with Chet Wrobleski of JM&F on November 12, 1984, I was requested by Chet to forward copies of all correspondence in this matter to him as well and I indicated I would comply.

why?

If you have any questions, please let me know.

Tony
